DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: Figures 1-6, and 7-9

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Figures 1-6-claims 1-3

Figures 7-9-claims 4-6

The following claim(s) are generic: None.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special

technical features for the following reasons: There appears, upon initial determination, to be no allowable feature common to both species.

4. During a telephone conversation with Mr. Schneider on 9/17/2007 a provisional election was made with traverse to prosecute the invention of Figures 1-6, claims 1-3.

5. Upon further consideration, claims 4-6 are not withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention as per the statement of allowability below.

REASONS FOR ALLOWANCE

6. The following is an examiner's statement of reasons for allowance: Upon concluding the search for the claimed invention of Figures 1-6, it is apparent that the initial determination relating to the species not possessing an allowable common feature was in error and that the common features of claims 1 and 4 are not found in the prior art, namely:

“a check member engageable with the shoe, wherein the check member and the shoe are set in one of an engaged state and a disengaged state, the check member moving integrally with the shoe as the shoe moves in the engaged state, the check member and the shoe being separated from each other and the check member being engaged with the guide rail in the disengaged state;

a raising and lowering member for pivotally supporting the check member, wherein the raising and lowering member moves the functional bracket upward or downward in cooperation with movement of the check member in the engaged state;”

As a result, all claims are examined and allowed.
